
Tech Tip of the Month

RRe-TRAN Radio Remote:

The RRe-TRAN now has editing capabilities. Certain station information is available to view, edit, and send back to the controller. These include % of ET, Run Cycle and Soak Times, Expected Flow rates, and Square Footage. If the controllers are Access Control protected, the codes will be in the handheld as well. To edit, the user may now enter his or her password into the handheld for controller access.

How do I request this option?

Handhelds with firmware of 1.5a or later already have this option. If your handheld does not have this option contact your local Field Representative for upgrade details.

Note: Only compatible with ET2000e controllers with 608.a firmware and later.
