Shortcut for Programming Stations

In the ET2000e controller, basic programming of each station for irrigation consists of entering minutes, minutes per cycle, and soak-in time. Once this information is entered for one station, did you know you can use Station Copy to quickly copy it to other stations that need similar programming?

To get to Station Copy, press Main Menu > Programs & Stations > Station Copy. If you're in the Station Programming screen, press * to move directly to the Station Copy screen.

The Station Copy feature allows you to copy the basic programming from one station to a single station, all stations assigned to a particular program, or all stations.

Copy from one station to another

Select the station you're copying from and to. Use this option if you have a small number of stations to copy or the stations are assigned to different programs.

Copy from a station to all stations assigned to a program

Select the station you're copying from and the program you're copying to. This option is ideal if every station you want to copy to is assigned to the same program.

Copy from a station to all stations in the controller

Select the station you're copying from and select ALL as the program you're copying to. This option helps you quickly get basic programming to every station in the controller.

Once the basic programming settings are copied, you can return to the Station Programming screen to adjust individual stations.

Note: If using Daily ET, only the cycle time and soak-in time will be copied using this feature.
