

Tech Tip of the Month

Percent Adjust

Per cent Adjust:

Do you have a program that needs a little extra or a little less water down for a finite amount of time?

Users now have the ability to set a percent adjust (ranging from -80% to +100%) to scheduled irrigation. Also set a duration that the percent adjust stays in effect (from 0-356 days, or forever). Once this time expires, the percent adjust reverts back to 0%. The days count down each time a start time is crossed. If a program has no start time but is using percent adjust, the days count down at the ET Roll time (default 8:00PM). These settings are changed from the Percent Adjust screen. Press **Main Menu >Programs & Stations > Percent Adjust**.

How do I request this option?

ET2000e Firmware version 606.d and above are standard with this option.
