

Tech Tip of the Month

Walk-Thru Program

Need to visually check all zones for operation prior to scheduling?

In the ET2000e, there is a way to accomplish this.

Press Manual > Walk-Thru.

Then set the following:

- 1) A delay time which allows you to physically arrive at the first zone that you are going to inspect prior to it coming on.
- 2) An amount of time for each zone to run.
- 3) The numerical order in which the zones are geographically situated, allowing travel from one zone to the next.

It's as easy as that. Zone integrity is just a Walk-Thru away!
