

Tech Tip of the Month

Calsense Command Center Online

Command Center Online is a web-based software where all you need is one or more ET2000e controllers with either a GPRS (model -GR), Ethernet (model -EN) or Wireless Ethernet (model -WEN) communication option. Engineered for easy and reliable access, all that's needed is a user name and password to start retrieving and monitoring data from your field controllers, make programming changes, and automatically share weather.

The benefits of using Command Center Online include:

- No software installation needed
- Users can access their data anywhere
- Create custom dashboards
- Software is updated automatically and transparently
- Database is safeguarded through automatic backups
- No tasks to configure.

Note: *ET2000 and older controllers are **NOT** supported.*

Contact your Calsense local Sales or Field Service Representative for more information
