

Tech Tip of the Month

 **ET2000 and ET2000e Controllers:** Tired of having to look through all of the alerts in the controller just to find something specific. Did you know that you can filter out the alerts that you don't want to see.

Press the **MAIN MENU** key.

Press the **REPORTS** Menu key.

Press the **ALERTS** Menu Key

Press the **STAR** key.

Now you can scroll through a list of alerts by type. This allows you to suppress all of the alerts that you don't want to look at. Need to look at another category, just press the **STAR** key again and choose another option from the list, it's that easy !
