

Tech Tip of the Month

 **ET2000 and ET2000e Controllers:** now have the ability to advise users of a power (Brown Out), or power failure situation. This is extremely helpful in troubleshooting power supply issues to the controller assembly. The user can check the alerts report screen for one of two alert stamps:

10/24 4:49AM POWER FAIL
10/24 5:30AM Program Restart

Or

10/24 4:49AM POWER FAIL (BROWN OUT)
10/24 4:50 AM Program Restart

The alert screen will show the type of power issue, the date and time that it occurred, and the date and time that the power resumed.
